

We've partnered with:

LONG is excited to announce our new partnership with Industrial Steam! Industrial Steam designs, assembles, tests, and ships pressurized deaerators, atmospheric deaerators, fuel oil systems, blowdown systems, condensate recovery, feedwater systems, and wet steam accumulators.

There are 5 primary reasons for making deaeration part of a boiler/steam/condensate cycle:

- Oxygen removal
- Carbon-dioxide (CO₂) removal
- Improved operation
- Improved heat transfer
- Energy savings

Next time you consider the installation of a steam boiler, consider a deaerator as well.
